## **PERNYATAAN**

**Pandangan yang dimuat dalam profil ini tidak mencerminkan pandangan USAID atau Pemerintah Amerika Serikat.**

## **DISCLAIMER**

The authors' views expressed in this profile do not necessarily reflect the views of the United States Agency for International Development or the United States Government.

## **UCAPAN TERIMA KASIH**

Laporan ini dapat dibuat berkat dukungan yang diberikan oleh United States Agency for International Development (USAID). Penulis menyampaikan terima kasih yang sebesar-besarnya kepada perwakilan dari asosiasi industri, usaha kecil dan menengah, badan pemerintah yang telah begitu mendukung dalam memberikan kami pemahamannya mengenai industri penyamakan kulit Indonesia. Penulis juga menyampaikan terima kasih khususnya kepada PT Karyamitra Budisentosa yang memberikan gambar contoh-contoh tren sepatu terkini.

## **KONTRIBUTOR**

Jason Bohoney (Senior Industry Advisor-Jakarta); Hery Kameswara (Industry Advisor-Jakarta); Wawan Abidin (Industry Advisor-Jakarta); Sri Astutik (Industry Advisor-Surabaya); Satia Pratiwi (Industry Advisor-Bandung); Eva Muchtar (Communications Manager); Harun Wiranto (Assistant Communications Manager).

## **ACKNOWLEDGMENTS**

This publication was made possible through support provided by the United States Agency for International Development (USAID). The authors wish to express their sincere gratitude to the representatives of industry associations, small-to-medium enterprises and government agencies who have been so supportive in providing us their insight about the Indonesian leather tannery industry. The authors also wish to express their sincere gratitude to PT Karyamitra Budisentosa for providing some images of current footwear trends.

# KATA PENGANTAR

*FOREWORD*

SENADA adalah proyek empat tahun yang didanai oleh the United States Agency for International Development (USAID). Dimulai pada bulan September 2005, tujuan SENADA adalah untuk meningkatkan pertumbuhan, tenaga kerja terserap dan penghasilan dengan meningkatkan daya saing industri manufaktur ringan padat karya yang signifikan di Indonesia. SENADA fokus pada enam industri, yakni alas kaki, furnitur, komponen kendaraan, garmen, aksesoris rumah tangga, dan teknologi informasi dan komunikasi (TIK).

Hambatan utama bagi kegiatan manufaktur di Indonesia adalah terbatasnya akses ke bahan baku dan bahan pendukung lainnya. Di industri alas kaki, contohnya, hambatan utamanya adalah mendapatkan bahan baku kulit. Berbagai penelitian dan analisis yang dilakukan SENADA menunjukkan bahwa saat ini ada kesenjangan komunikasi antara industri penyamakan kulit dan produsen alas kaki mengenai jenis, mutu dan volume kulit yang dibutuhkan untuk produksi alas kaki. Akibatnya, transaksi antara kedua pihak sangat terbatas.

Untuk membantu memecahkan masalah ini, SENADA, bekerja sama dengan APKI (Asosiasi Penyamak Kulit Indonesia), telah membuat "Profil Spesifikasi Kulit Tersamak Indonesia 2007", yang menggambarkan kapasitas dan penawaran produk dari segmen berbagai penyamak kulit di Indonesia. SENADA dan APKI berharap terbitan ini akan membantu meningkatkan frekuensi dan volume perdagangan dalam negeri saat ini melalui penjelasan yang lebih baik mengenai pasokan kulit yang dibuat industri penyamakan untuk keperluan produksi alas kaki.

Jika Anda ingin mengetahui lebih banyak mengenai prakarsa ini atau proyek SENADA, silakan kunjungi kami di situs web [www.senada.or.id](http://www.senada.or.id) atau hubungi kami di kantor Jakarta di nomor telepon (21) 579-32577.

Jakarta, Juni 2007

Steve Smith  
Direktur Proyek SENADA

SENADA is a four-year project financed by the United States Agency for International Development (USAID). Started in September 2005, the objective of SENADA is to generate growth, jobs and income by increasing the competitiveness of Indonesia's major labor intensive light manufacturing industries. SENADA focuses on six industries: footwear, furniture, auto parts, garments, home accessories and information and communications technology (ICT).

A common constraint to manufacturing activities in Indonesia is limited access to raw and intermediate materials. In the case of footwear, an important constraint involves the sourcing of leather. Various research and analysis undertaken by SENADA show that there is currently a communication gap between leather tanneries and footwear manufacturers regarding the type, quality and volume of leather needed for footwear production. As a result, trade between the two parties has been limited.

To help resolve this issue, SENADA, in cooperation with APKI (the Indonesian Tanners Association), has created the *Indonesian Leather Specifications Profile 2007*, outlining the capacity and product offerings of a broad segment of domestic tanneries. It is both SENADA's and APKI's common objective that this publication will help increase the current frequency and volume of domestic trade through better clarifying the supply of leather made available by tanneries for footwear production purposes.

If you would like to learn more about either this initiative or the SENADA project, please visit us at [www.senada.or.id](http://www.senada.or.id) or contact our Jakarta office at (21) 579-32577.

Jakarta, June 2007

Steve Smith  
Project Director of SENADA

Semenjak tahun 1970 hingga tahun 1995, industri penyamakan kulit telah mengalami pertumbuhan yang cukup pesat di dalam penggunaan teknologi untuk merubah kulit mentah dan wet blue hingga menjadi kulit jadi yang akan digunakan untuk kepentingan industri barang-barang kulit, seperti sepatu, tas, sarung tangan, garmen dan lain lain. Nilai tambah yang dihasilkan kulit cukup tinggi yang menjadikannya bahan baku potensial untuk kepentingan industri hilir barang-barang kulit seperti tersebut di atas. Hal ini dibuktikan dengan pertumbuhan nilai ekspor kulit dan barang-barang kulit setiap tahunnya. Sebagai contohnya total nilai ekspor kulit dan barang-barang kulit di tahun 1995 mencapai US\$ 2,4 miliar dan menjadi penyumbang devisa terbesar ke-3 untuk kategori ekspor non-migas.

Sehubungan dengan krisis ekonomi di tahun 1997/1998, industri penyamakan kulit menghadapi masa-masa sulit dibuktikan dengan berkurangnya nilai produksi dan jumlah tenaga kerja yang terlibat bahkan hingga tutupnya banyak perusahaan penyamak. Kebijakan pemerintah setelah krisis yang tidak mendukung industri penyamakan kulit telah menyebabkan industri ini semakin terpuruk karena industri, dalam keadaan sulit, lebih suka mengekspor dalam bentuk kulit mentah atau wet blue. Hubungan antara industri hulu (penyamak kulit) dengan industri hilir (sepatu, garmen dan barang barang kulit lainnya) menjadi semakin renggang hingga mencapai titik nadir di tahun 2005/2006. Karena itu, kebijakan mengenai industri penyamakan harus diperbaiki untuk mengatasi masalah ini. Profil yang disiapkan oleh SENADA bekerjasama dengan APKI dan APRISINDO ini diharapkan dapat ikut berperan dalam merekatkan kembali hubungan antara industri hulu dan hilirnya.

Atas nama Asosiasi Penyamak Kulit Indonesia, saya mengucapkan selamat atas terbitnya Profil Spesifikasi Kulit Tersamak Indonesia 2007.

Jakarta, Juni 2007

Diyono Hening Sasmito  
Ketua Umum ASOSIASI PENYAMAK KULIT INDONESIA

In the period between 1970 and 1995, the leather tannery industry underwent a rapid shift to technologies that convert raw hide and wet blue into finished leather, which in turn is used in leather products such as shoes, bags, gloves, garments etc. Economic benefits accrue to downstream actors as value added from hide and skin processing is high. This has been proven by constant annual growth in exports of leather and leather products. As an example, total exports of leather and leather products in 1995 were worth US\$2.4 billion, making the sector the third largest non-oil and gas foreign reserve earner. In the wake of the 1997/1998 economic crisis, the tannery industry experienced a difficult period as seen in decreased production and manpower. Many tannery companies were even forced to close.

The tannery industry has suffered further because post-crisis government policy failed to support the sector and in such a situation companies preferred to export wet blue leather. As a consequence the leather tannery industry was further removed from the leather product value chain and the link reached the lowest point in 2005/2006. It is therefore important to address this problem. It is hoped that the profile prepared by SENADA in cooperation with APKI and APRISINDO will help reconnect the tannery sector and the leather product industry.

On behalf of the Indonesian Tanners Association, I would like to congratulate everybody on the publication of the Indonesian Leather Specifications Profile 2007.

Jakarta, June 2007

Diyono Hening Sasmito  
Chairman of Indonesian Tanners Association

Salah satu persoalan terbesar yang dihadapi industri manufaktur nasional adalah minimnya suplai bahan baku dari dalam negeri, menyusul tidak berkembangnya industri pendukung. Akibat tidak tersedianya bahan baku di dalam negeri, pelaku industri kemudian melakukan impor agar proses produksi tetap bisa berjalan. Sudah bisa dipastikan, dengan menggunakan bahan baku impor, produk manufaktur Indonesia menjadi tidak kompetitif, baik di pasar domestik maupun ekspor, karena adanya biaya tambahan, transportasi lebih lama, serta proses importasi yang lama.

Kelangkaan pasokan bahan baku di pasar dalam negeri hampir terjadi pada semua sektor industri, termasuk industri penymakan kulit serta industri kulit dan produk kulit (alas kaki, tas, sarung tangan, dan sebagainya). Di industri ini, kelangkaan pasokan bahan baku kulit terus terjadi, dan hingga kini belum ada solusi strategis untuk mengatasinya. Kelangkaan bahan baku kulit di dalam negeri juga dipicu oleh tidak sedikit kulit mentah yang diekspor ke luar negeri, karena harganya yang lebih menguntungkan. Padahal, tanpa diekspor pun, volume produksi kulit dalam negeri belum mampu memenuhi kebutuhan industri perkulitan domestik.

Kulit mentah Indonesia, sekalipun kualitasnya cenderung menurun akibat penanganan awal yang kurang baik, namun tetap diminati konsumen luar negeri. Pasalnya, Indonesia merupakan negara berstatus bebas penyakit mulut dan kuku (PMK) berdasarkan laporan Organisasi Kesehatan Hewan Dunia (OIE). Hal ini merupakan daya tarik tersendiri bagi negara importir kulit yang memberlakukan kebijakan *maximum security* terhadap pemasukan kulit mentah. Keuntungan bagi negara importir, namun kerugian bagi Indonesia. Setelah diekspor, Indonesia akan mengimpor kembali kulit tersebut dalam bentuk barang jadi, yang harganya tentu lebih mahal.

Untuk menjamin ketersediaan pasokan bahan baku kulit di dalam negeri, pemerintah perlu mendorong industri penymakan kulit agar meningkatkan kualitas produknya sesuai standar kualitas yang dipersyaratkan oleh konsumen domestik. Termasuk meningkatkan kapasitas dan volume produksi, menyusun strategi pengembangan industri hulu dan hilir secara

One of the main challenges confronting the national manufacturing industry is a lack of domestic supply of raw materials due to an undeveloped supporting industry. Because of the shortage of domestic raw materials, companies had no choice but to import them so that production will not be disrupted. It is almost certain that the use of imported raw materials has made Indonesia's manufacturing products uncompetitive, both in the domestic and overseas markets, because of additional costs and more time spent on importation and transport.

The shortages in raw materials in the domestic market have virtually hit all industry sectors, including the leather tannery, leather and leather product sectors (footwear, bags, gloves etc.). In this industry, such a shortage has been chronic and no strategic solution is in sight to end the problem. The domestic shortage of raw hide was partly because much of it is exported for higher profits. Even without exports, domestic leather production is unable to meet domestic demand.

Domestic raw hide, despite its lack of quality due to poor handling, is still in high demand overseas because Indonesia is a country which is free from foot and mouth disease according to the International Organisation for Animal Health (OIE). This makes Indonesia's raw hide attractive in countries that adopt maximum security policy with regard to the product. This is a big loss for Indonesia because we will import the materials after they become finished products, which certainly cost more.

To guarantee domestic supply the government needs to encourage the leather tannery industry to improve quality in line with standards set by domestic consumers and increase production capacity and volume. It also needs to draw up a primary and secondary industry development strategy through synergy and the cluster approach and review various regulations on leather importation which have been hindering the secondary sector industry.

bersinergis melalui pendekatan klaster, serta meninjau kembali berbagai peraturan mengenai importasi kulit yang dinilai menghambat industri hilir.

Harap diakui, pertumbuhan industri alas kaki nasional belum banyak berpengaruh terhadap sektor industri penyamakan kulit, sebagai industri pendukungnya. Tingkat utilisasi industri penyamakan kulit nasional saat ini masih tetap rendah. Idealnya, ketika industri alas kaki dan barang kulit lainnya di dalam negeri mulai tumbuh dan berkembang, hal ini akan berdampak positif terhadap peningkatan kapasitas produksi penyamakan kulit nasional. Namun hal itu tidak terjadi.

Sekarang tinggal menunggu komitmen pemerintah terhadap ketersediaan bahan baku kulit di dalam negeri. Dalam hal ini, tuntutan terhadap dukungan pemerintah sesungguhnya tidak hanya pada industri hulu, namun juga industri hilir. Kerja sama yang baik secara bersinergis antara Aprisindo dan APKI sangat diperlukan guna menumbuhkembangkan industri pendukung. Pasalnya, tanpa dukungan industri penyamakan kulit yang kuat, sulit mengembangkan industri alas kaki yang berdaya saing.

Jakarta, Juni 2007

Eddy Widjanarko  
Ketua Umum ASOSIASI PERSEPATUAN INDONESIA

It must be recognised that the growth of the footwear industry has not affected leather tannery as a supporting industry. The tannery industry remains underutilized despite the growth of the footwear industry.

Now all we can do is wait for a commitment by the government to ensure domestic supply. In this case, demand for government support does not only apply in the primary sector but also in the secondary one. Cooperation between APRISINDO and APKI is essential to support the growth of the supporting industry. Without the support of the leather tannery industry, it will be difficult to develop a competitive footwear industry.

Jakarta, June 2007

Eddy Widjanarko  
Chairman of Indonesian Footwear Industry Association

# **INDUSTRI PENYAMAKAN KULIT INDONESIA**

**INDONESIAN TANNERY INDUSTRY**

## A. GAMBARAN UMUM

Indonesia memiliki sejarah panjang penyamakan kulit dengan para produsen dalam negeri yang sebagian besar menggunakan kulit sapi, kerbau, domba dan kambing dalam proses produksinya. Penyamak kelas menengah hingga besar berada di sejumlah daerah di seluruh pulau Jawa, termasuk Jakarta Raya, Jawa Barat (Cianjur dan Bandung), Jawa Tengah (Yogakarta, Solo, Semarang) dan Jawa Timur (Malang, Pasuruan, Sidoarjo dan Surabaya); sementara penyamakan rumahan sebagian besar berada di Jawa Barat (Garut) dan Jawa Timur (Magetan). Perusahaan penyamakan tersebut berbeda dalam hal besar dan kemampuan teknologinya. Sekitar 25-30% dari mereka memiliki peralatan yang dibutuhkan untuk mengotomatiskan semua langkah penting untuk memproduksi kulit jadi (seperti cutting, stretching, dying, buffing, dsb). Sisanya sebesar 70-75% dapat dikategorikan sebagai penyamakan “industri rumah tangga” yang bergantung pada karyawan untuk melakukan proses yang sama secara manual atau dengan tangan.

Produksi kulit merupakan pekerjaan yang cukup rumit, terdiri dari 23 langkah berbeda, dimulai dengan flaying kulit mentah dan menyelesaiannya dengan embossing, yaitu menekankan grain pilihan pada permukaan kulit jadi. Selama lima tahun terakhir, produksi kulit domestik telah mengalami perubahan yang sangat signifikan. Sebagai contoh, dari tahun 2004 hingga tahun 2006, produksi kulit jadi untuk alas kaki meningkat 49% dari 45 juta kaki persegi di tahun 2002 menjadi 67 juta di tahun 2004. Akan tetapi, dalam dua tahun terakhir, tingkat produksi telah menurun sebesar 15% dari 67 juta di tahun 2004 menjadi 57 juta kaki persegi di tahun 2006. *Lihat grafik 1.*

Sebagaimana ditunjukkan dalam grafik 1, tingkat kulit domestik yang diproduksi belum cukup memenuhi tingkat konsumsi. Pada tahun 2006 konsumsi kulit jadi untuk alas kaki domestik diperkirakan sebesar 69 juta kaki persegi, sementara produksi kulit jadi untuk alas kaki hanya sebesar 57 juta kaki persegi. Dari jumlah tersebut, 12 juta diekspor ke perusahaan sepatu milik asing, sehingga menciptakan defisit sekitar 24 juta kaki persegi. Defisit ini ditangani melalui impor kulit jadi dari perusahaan di India, Italia, Bangladesh dan China<sup>1</sup>.

<sup>1</sup>APKI; Asosiasi Penyamak Kulit Indonesia

## A. OVERVIEW

Indonesia has a long history of leather tanning, with domestic manufacturers primarily utilizing cow, buffalo, sheep and goat hides in the production process. Medium to large-scale tanneries are located in several areas throughout Java, including Greater Jakarta, West Java (Cianjur and Bandung), Central Java (Jogjakarta, Solo, Semarang and East Java (Malang, Pasuruan, Sidoarjo and Surabaya); while home tanneries are primarily in West Java (Garut) and East Java (Magetan). These firms differ in both size and technological capability, with approximately 25-30% having the necessary equipment to automate all critical steps to produce finished leather (e.g., cutting, stretching, dyeing, buffing, etc.). The remaining 70-75% can be categorized as home or “cottage industry” tanneries, which rely on employees to undertake the same processing steps by hand.

Leather production is a complex task, encompassing 23 distinct steps, starting with the flaying of raw hides or skins and finishing with embossing, which presses a chosen grain into the surface of the finished hide. During the past five years, domestic production of finished leather has significantly varied. For example, from 2004 to 2006, leather production for footwear increased 49% from 45 million square feet in 2002 to 67 million in 2004. However, in the past two years, production levels have decreased by 15%, from 67 million in 2004 to 57 million square feet in 2006. See graphic 1.

As shown in graphic 1, the level of domestic leather produced has not been enough to satisfy consumption. In 2006, domestic finished leather for footwear consumption was estimated to be 69 million square feet, while domestic leather production was only 57 million square feet. Of the 57 million square feet produced, 12 million was exported to foreign-owned footwear manufacturers, creating a deficit of 24 million square feet. This deficit was addressed through the import of finished leather, primarily from firms in India, Italy, Bangladesh and China<sup>1</sup>.

4

Proses tanning.  
Tanning process.

<sup>1</sup>APKI; Indonesia Tanners Association

**KULIT JADI UNTUK ALAS KAKI**  
**(kebanyakan terbuat dari kulit sapi,  
dalam juta kaki persegi)**

Tahun	Konsumsi	Produksi	Ekspor	Impor
2002	60	45	18	33
2003	64	56	19	27
2004	68	67	24	25
2005	66	62	22	23
2006	69	57	12	24

Sumber: Asosiasi Persepatuan Indonesia (APRISINDO)

Catatan: Ekspor tahun 2004 & 2005 termasuk wet blue

Defisit ini sebagian dikarenakan adanya penurunan jumlah perusahaan penyamakan kulit yang bisa beroperasi. Sebagai contoh, pada tahun 1998 ada 112 perusahaan penyamakan skala menengah dan besar dan 400 penyamakan rumahan, sementara jumlah ini turun drastis menjadi 67 dan 240 masing-masing di tahun 2006. Ini merupakan penurunan sebesar 40% dari total jumlah penyamakan yang masih memproduksi kulit untuk digunakan dalam produksi.

5

**JUMLAH PENYAMAK KULIT YANG BEROPERASI**

Tahun	Jumlah Perusahaan Penyamakan Menengah-Besar	Jumlah Penyamakan Rumahan
1998	112	400
2000	76	252
2002	46	136
2004	55	200
2006	67	240

Sumber: Asosiasi Penyamak Kulit Indonesia (APKI)

Walau perusahaan penyamakan Indonesia telah mengalami masa sulit selama dekade ini, diperkirakan industri ini masih akan meningkat. Pada tahun 2006, 45% lebih banyak perusahaan penyamakan menengah besar dan 76% lebih banyak penyamakan rumahan beroperasi dibandingkan ketiga tahun 2002. Jumlah ini ditambah dengan kemampuan Indonesia untuk memproduksi jenis kulit yang sangat dibutuhkan, seperti Java Box, menempatkan industri kulit domestik sangat baik untuk peningkatan pertumbuhan di masa mendatang.

**FINISHED LEATHER FOR FOOTWEAR**  
**(mostly made of cow hide, in million square feet)**

Year	Consumption	Production	Eksport	Import
2002	60	45	18	33
2003	64	56	19	27
2004	68	67	24	25
2005	66	62	22	23
2006	69	57	12	24

Source: Indonesia Footwear Producers Association (APRISINDO)

Notes: Export in 2004 & 2005 including wet blue

This deficit is partially explained due to a decrease in the number of tanneries that are still in operation. For instance, in 1998 there were 112 medium-to-large scale tanneries and 400 home tanneries, while this number dropped significantly to 67 and 240 firms respectively in 2006. This represents a decrease of 40% in the total number of tanneries still manufacturing leather available for use in production.

#### NUMBER OF OPERATING TANNERIES

Year	Total of Medium-Large Tanneries	Total of Home Tanneries
1998	112	400
2000	76	252
2002	46	136
2004	55	200
2006	67	240

Source: Indonesia Tanners Association (APKI)

Although Indonesian tanneries have faced difficulties during this decade, the outlook for the industry is improving. In 2006, 45% more medium-to-large scale tanneries and 76% more home tanneries are in operation compared to 2002. This, in combination with Indonesia's ability to produce highly desirable leather types, such as Java Box, position the domestic leather industry well for increased future growth.

## **B. ISTILAH DALAM INDUSTRI PENYAMAKAN KULIT**

### **Aniline**

Bahan celup transparan yang digunakan untuk kulit yang bagus, yang akan menyebar ke seluruh bagian kulit yang membulkan penetrasi yang bagus ke dalam kulit.

### **Aniline Leather**

Kulit yang telah dicelup hanya dengan bahan celup aniline transparan.

### **Buffing**

Proses pengamplasan yang menghaluskan tonjolan ataupun lubang tanpa mempengaruhi karakter alami dari kulit.

### **Chemical Tan**

Proses penyamakan dengan alum atau chrome.

### **Chrome**

Bahan kimia penyamak yang sangat bagus.

### **Cowhide**

Kulit mentah dari seekor sapi dewasa antara 45-60 kaki persegi.

### **Degreasing**

Proses membuang lemak dan minyak dari kulit mentah.

### **Dehair**

Proses membuang bulu dari kulit mentah menggunakan bahan kimia alkali.

### **Deliming**

Proses merendam kulit untuk netralisasi alkali dengan menggunakan bahan acid lemah.

### **Drum Dyeing (Vat Dyeing)**

Untuk menjamin penetrasi bahan celup secara penuh, kulit dimasukkan ke dalam bahan celup dan diputar-balik di dalam drum baja.

### **Dubbin**

Suatu bahan campuran lemak dan minyak yang digunakan untuk menghaluskan kulit.

## B. KEY INDUSTRY TERMINOLOGY

### Aniline

A transparent dye used for fine leather hides that permeates the entire hide and results in a rich finish.

### Aniline Leather

Leather that has been dyed only with transparent aniline dyes.

### Buffing

An abrasive process that smoothes natural bumps and blemishes without affecting the natural characteristics of the hide. The mechanical process of pre-coloration used to minimize the scars and scratches on a hide.

### Chemical Tan

The process of tanning with alum or chrome.

### Chrome

An excellent tanning substance.

### Cowhide

In upholstery terms, the entire hide of a bovine, usually about 45–60 sq. ft.

### Degreasing

The removal of natural fats and oils from a skin or hide by immersing into a degreasing solution before the tanning process.

### Dehair

Using an alkali bath to remove hair or fur from a skin or hide that will be made into leather.

### Deliming

Using a weak acid solution to soak a skin to neutralize alkalis such as lime.

### Drum Dyeing (Vat Dyeing)

Also known as vat dyeing. Assures full dye penetration, hides are immersed in dye and tumbled in a steel drum.

### Dubbin

A mixture of tallow and oil used for softening hides.

**Embossing**

Corak kulit luar buatan manusia yang bersifat permanen, ditambahkan melalui proses pemanasan dan tekanan terhadap kulit mentah bagian luar yang diperbaiki. Suatu proses dengan stamping yang akan memperbaiki tekstur kulit luar yg dirubah oleh proses buffing.

**Finishing**

Suatu proses yang terjadi setelah pencelupan pertama seperti embossing atau buffing. Sebagai tambahan, untuk membuat kulit lebih tahan lama, bahan pewarna dapat diterapkan untuk menahan pengikisan selain untuk pengayaan warna. Proses ini biasanya memerlukan tiga atau empat pengerajan coating. Semakin jadi suatu kulit maka akan semakin kaku. Kulit yang dicelup dengan aniline atau vat akan lebih lembut dibanding kulit jadi, meskipun ini bisa diatasi dengan proses milling. Faktor-faktor lain yang mempengaruhi kelembutan termasuk kualitas tannin dan aniline yang digunakan. Pengerajan paska-penyamakan seperti : dyeing, rolling, pressing, lackuering, antiquing, waxing, buffing, embossing, glazing, waterproofing, or flame proofing.

**Fleshing**

Juga disebut sebagai trimming atau siding, adalah metode pembuangan lemak, daging serta tulang muda dari kulit mentah sebagai persiapan untuk penyamakan. Alat-alat yang digunakan seperti pisau dan fleshing beam.

**Flesh Side**

Bagian dari kulit mentah yang sebelumnya menempel dengan kerangka hewan.

**Full Aniline**

Kulit jadi yang telah dicelup dengan aniline tak punya zat warna, sehingga tanda-tanda alami tetap terpelihara.

**Furs**

Kulit mentah yang disamak tanpa membuang rambut atau bulu.

**Glazing**

Juga disebut Top Coating. Penggunaan resin polyurethane yang transparan sebagai lapisan pelindung untuk kulit yang membuat kulit menjadi sangat mengkilap.

## **Embossing**

Permanent artificial grain patterns, added through heat and pressure to corrected grain hides. A stamping process that restores grain texture removed by buffing.

## **Finishing**

Any process occurring after the initial dyeing such as embossing or buffing. Additionally, to make leathers more durable, coloring substances may be applied to provide additional abrasion resistance as well as color enhancement. This process usually involves three or four coating operations. The more finish a leather has, the stiffer it becomes. Aniline or vat dyed leathers will tend to be softer than finished leathers, although this can be overcome by milling. Other factors affecting softness include the tannin quality and aniline used. Any post tanning treatment, such as: dyeing, rolling, pressing, spraying, lacquering, antiquing, waxing, buffing, embossing, glazing, waterproofing, or flame proofing.

## **Fleshing**

Also known as trimming or siding, is the method of removing fat, flesh and gristle from a skin or hide in preparation for tanning. Tools used in this process are fleshing beam and fleshing knife.

## **Flesh Side**

The side of the skin or hide that once was attached to the animal carcass.

## **Full Aniline**

Aniline dyed and aniline finished leathers have no pigments, thus all of nature's signatures are present.

## **Furs**

Skins or hides tanned without removing the hair or fur.

## **Glazing**

Also called top coating. The application of a synthetic transparent polyurethane resin applied as a protective coating to the leather resulting in a high gloss or matte finish.

## **Grain**

Outer or hair side of the hide. The distinctive pore and wrinkle pattern of a hide; may be either natural or embossed.

**Grain**

Bagian luar dari kulit. Pori-pori dan corak kerutan yang khas dari kulit. Bisa alami juga bisa diemboss.

**Hide**

Kulit keseluruhan dari sapi atau hewan besar lainnya.

**Kip**

Kulit dari anak sapi atau sapi kecil.

**Milling**

Kulit yang disamak diputarbalikkan di dalam drum menggunakan panas dan air untuk menghaluskan grain.

**Mineral Tanned**

Kulit yang disamak dengan sejumlah bahan mineral, utamanya chrome garam, alumunium dan zirconium.

**Neck Wrinkles**

Kerutan alami di kulit bagian leher dan bahu.

**Nude Finish**

Kulit yang dicelup vat tapi memiliki sedikit atau tanpa bahan finish pelindung.

**Pelt**

Kulit dengan bulu yang masih belum disamak.

**Pickling**

Proses yang menggunakan garam dan asam untuk mengawetkan kulit mentah hingga enam bulan.

**Pure Aniline**

Kulit yang menerima pewarnaan hanya dari bahan celup.

**Rawhide**

Kulit mentah yang sudah dicabuti bulunya dan dibersihkan yang belum disamak.

**Semi Aniline**

Kulit yang sedikit ditingkatkan dan dicelup aniline yang ditutup dengan suatu lapisan yang nyata untuk menjamin konsistensi warna dan memberikan perlindungan terhadap noda.

## **Hide**

The whole skin from cattle or other large animals.

## **Kip**

The skins from calves or small beef cattle.

## **Milling**

Tanned hides are tumbled in drums using heat and water to soften or enhance the grain.

## **Mineral Tanned**

Leather which has been tanned with any of several mineral substances, notably the salts chromium, aluminum and zirconium.

## **Neck Wrinkles**

Natural creases from the neck and shoulder area of the hide.

## **Nude Finish**

Leather that is vat dyed but has little or no protective finish.

## **Pelt**

Skins with the hair or fur on that have not been tanned.

## **Pickling**

A process using salts and acids to preserve a hide or skin for up to six months.

## **Pure Aniline**

Hide that receives its only coloring from dyes.

## **Rawhide**

Dehaired and cleaned skins that have been prepared to be tanned.

## **Semi Aniline**

Aniline-dyed and slightly enhanced leather that is covered with a clear coating to ensure color consistency and provide protection against stains.

## **Skinning**

The process of removing the skin or hide from a dead animal.

## **Slicking Out**

Scraping a leather surface to push out excess water and oils and to remove wrinkles.

**Skinning**

Proses pengulitan hewan mati.

**Slicking Out**

Proses mengikis permukaan kulit untuk membuang sisa air dan minyak dan membuang kerutan.

**Snuff**

Pengamplasan secara halus terhadap permukaan kulit.

**Splitting Shaving Process**

Setelah kulit mentah disamak dan sisa-sisa embun dibuang, kulit dimasukkan ke dalam mesin yang memotong kulit menjadi bagian top grain dan lapisan split. Setelah splitting, kulit diletakkan di mesin lain untuk meratakan ketebalannya.

**Sulfuric Acid**

Bahan yang digunakan untuk pickling dan tanning.

**Tannic Acid**

Bahan active yang terdapat dalam intisari sayuran yang digunakan untuk mengubah kulit mentah (hide dan skin) menjadi kulit (leather).

**Tanning**

Seni pembuatan leather dari kulit mentah yang sesungguhnya pengawetan hide dan penyiapan untuk menyerap bahan celupan. Hal ini dapat dilakukan melalui proses kimia di dalam vat atau drum yang besar.

**Tanning agents**

Kulit masa ini disamak dengan chromium sulphate yang mudah larut. Bahan sintetis serta bahan sayuran dari tumbuhan dan pepohonan juga mungkin digunakan sebagai kombinasi.

**Top Coat**

Resin yang digunakan kepada kulit sebagai lapisan untuk membuat kulit sangat mengkilap.

**Top Grain**

Ketika suatu kulit dibelah, Top Grain adalah lapisan paling atas atau lapisan sel berambut dari kulit yang memiliki grain yang alami. Dapat diperbaiki dengan pengamplasan atau buffing dan dilindungi dengan top coating.

## **Snuff**

Slight abrasion of the hide's surface, likened to removing newsprint from paper.

## **Splitting Shaving Process**

After hides are tanned and excess moisture is removed they are fed through a machine which cuts the hide into the valuable top grain portion and a split layer. After splitting, the hide is put through another machine that shaves it to a uniform thickness.

## **Sulfuric Acid**

Used as a tanning solution and for pickling.

## **Tannic Acid**

The active agent found in many vegetable substances used to convert a skin or hide into leather.

## **Tanning**

The art of making leather from rawhides that is actually preserving hides and preparing them to absorb dyes. This is accomplished by a chemical process in large vats or drums.

## **Tanning agents**

Today's leathers are tanned with soluble chromium sulphate. Synthetic tannins, vegetable materials from plants and trees may also be used.

## **Top Coat**

Resin applied to leather as a coating to form a high gloss or matte finish.

## **Top Grain**

When a hide is split, the top grain is the very top layer or hair cell layer of the hide that possesses natural grain. It can be corrected by sanding or buffing and protected by top coating.

## C. JENIS-JENIS KULIT JADI

Berbagai macam kulit hewan baik sapi, kerbau, kambing dan domba pada dasarnya dapat dibuat menjadi kulit-kulit di bawah ini.

### **Full Grain/Full Top Grain Leather**

Dikatakan demikian bila tidak diratakan atau tidak dihaluskan pada bagian atasnya. Jadi ketika bagian luar kulit secara utuh masih alami dipertahankan selama proses penyamakan dinamakan Full Grain Leather.

### **Corrected Grain Leather**

Kulit yang memiliki permukaan tambahan/buatan yang diemboss ke dalamnya setelah dihaluskan lebih bagian luar kulit yang kurang bagus.

### **Nappa Leather**

Mulanya hanya kulit domba yang dinamakan Nappa. Tetapi belakangan ini kata 'Nappa' menjadi istilah kulit lain yang berarti 'lembut' seperti kulit sapi Nappa.

### **Patched Leather**

Setelah kulit disamak, dicelup dan melalui proses akhir (finishing) sesuai keinginan, pengrajin yang terlatih kemudian memilih kulit yang cocok dalam warna dan teksturnya. Masing-masing lembaran kulit kemudian dipotong dengan tangan ke dalam ukuran yang berbeda-beda, lalu dijahit ke dalam corak-corak berbentuk mosaik menjadi produk akhir yang berbeda dari lainnya.

ATAS Top  
Full Grain Leather

BAWAH Bottom  
Corrected Grain Leather

### **Patent Leather**

Ketika kulit sapi dikerjakan dengan bahan akhir yang protektif seperti cat acrylic atau bahan tahan air untuk memproduksi hasil akhir yang sangat mengkilap.

### **Nubuck Leather**

Kulit aniline penuh yang telah dihaluskan/diratakan untuk menciptakan bintik (naps). Nubuck termasuk Top Grain Leather sehingga tak bisa dikategorikan sebagai Split atau Suede. Permukaan kulit aniline Nubuck disikat untuk menciptakan tekstur seperti beludru, sehingga seringkali dikira suede. Suede adalah bagian dalam dari potongan kulit, sedangkan Nubuck adalah efek yang timbul dari pengrajin di bagian luar kulit.

## C. FINISHED LEATHER TYPES

Various types of cow hides, buffalo hides, goat skins and sheep skins basically can be processed into the following types of leather.

### **Full Grain/Full Top Grain Leather**

In order to be considered full grain leather it cannot have been buffed or sanded on the top. So, when the full natural grain is retained throughout the tanning process it is called Full Grain Leather.

### **Corrected Grain Leather**

Leather that has had an artificial grain embossed onto it after the range marks have been buffed out.

### **Nappa Leather**

Originally, only sheepskin was referred to as Nappa. However, in recent years, the word Nappa has become another leather term meaning soft, as in Nappa cowhide. A Nappa leather, or sheep/lamb skin, is naturally one of the softest leathers in the market today. If it looks good and feels good, it probably is, but it's not always a better or more expensive grade of leather like true Nappa is.

### **Patched Leather**

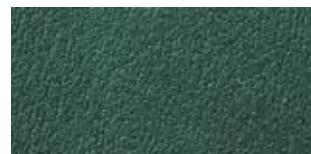

After the hides are tanned, dyed and finished as desired, then skilled craftsmen carefully select leather that match in color and texture. Each leather hide is then cut by hand into various size pieces and then it is sewn into mosaic type patterns making a final product that is one of a kind.

### **Patent Leather**

When cowhide is treated with protective finishes such as acrylic paints or waterproofing to produce an extremely shiny finish.

### **Nubuck Leather**

A full aniline leather that has been sanded or buffed in order to create a nap. This is top grain leather and is not considered a split or suede. Nubuck Aniline leathers on which the surface has been brushed to create a texture similar to that of velvet. It is often mistaken for suede, but suede is the flesh side of a piece of leather while Nubuck is an effect that is done to the grain side, making it considerably stronger.

ATAS Top  
Nappa Leather

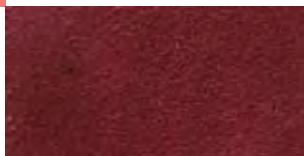

BAWAH Bottom  
Nubuck Leather

**Suede Leather**

Ketika kulit di-*finish* melalui penghalusan dengan roda emory untuk menciptakan suatu permukaan yang berbintik (*naps*). Suede terbuat dari lapisan yang dipisahkan dari bagian *top grain* suatu kulit.

**Pull-up Leather**

Kulit yang memperlihatkan efek warna meretak bila kulit ditarik ketat. Kulit ini menggunakan bahan celup full aniline, dan sebagai tambahan memiliki sejenis minyak dan/atau *wax* aplikasi, yang menyebabkan warna menjadi terlihat lebih muda ketika kulit ditarik.

ATAS Top  
Suede Leather

BAWAH Bottom  
Pull Up Leather

### **Suede Leather**

When leather is finished by buffing with an emory wheel to produce a napped surface. Suede is made from layers split off from the top grain portion of the hide.

### **Pull-up Leather**

It produces a burst of color when the leather is pulled tight. This leather uses a full aniline dye and in addition has an oil and/or wax application, which separates causing the color to become lighter as the leather is pulled.

Kegiatan di tempat penyamakan kulit.  
Activity in tanning place.
